There is a reduction of rate for quick successions on the following scale:—

- where the second death occurs within one year of the first death, by fifty per cent;
- where the second death occurs within two years of the first death, by forty per cent;
- where the second death occurs within three years of the first death, by thirty per cent;
- where the second death occurs within four years of the first death, by twenty per cent;
- where the second death occurs within five years of the first death, by ten per cent.

Provided that where the value, on which the duty is payable, of the property on the second death exceeds the value, on which the duty was payable, of the property on the first death, the latter value shall be substituted for the former for the purpose of calculating the amount of duty on which the reduction under this section is to be calculated.

Fixed duties may be paid:—

- (a) if the gross value of the estate does not exceed three hundred pounds, a fixed duty of thirty shillings, or

(b) if such gross value does not exceed five hundred pounds, a fixed duty of fifty shillings. These rates do not apply to the estate of a person who at his death is living a communal state in a native tribe.

Provided that any person paying royalty on cedar wood after the 31st July, 1924, shall be entitled until further notice to a refund calculated in the manner set out below, on satisfying the Conservator of Forests that such cedar wood has been exported in the form of pencil slats, billets, and sold to or for the account of pencil manufacturers.

The amount of the refund shall be calculated from the actual cubic contents of the slats and billets exported. For this purpose a case containing 4,800 six-ply slats or a proportionate number of billets will be considered to measure twelve and one-half cubic feet.

The above rates shall be subject to a general reduction of 1 per cent per mile outside a radius of 10 miles of any point on the Tanganyika Railways and their branches or of any recognised port on the coast or on the lakes Victoria Nyanza, Tanganyika and Nyasa and such reduction shall extend to a maximum of 30 per cent after which no further reduction shall be made.

The measurement will be by cubic foot of sound bole calculated in the case of standing trees from the $\frac{1}{4}$ girth at breast height (4ft. 7ins.) and the timber height from the ground with employment of suitable form factors.

The contents of fallen trees will be calculated from the mean $\frac{1}{4}$ girths and lengths of the merchantable logs they contain.

Timber too unsound to measure in the bole will be split and sold by stacked measurement and Royalty payable in respect of such timber will be subject to a reduction of 25 per cent of the Royalty prescribed for the species.

Unless otherwise stated all crown and branch wood is the property of the purchaser of the bole. Dead and refuse timber will be sold at half of the above rates with the exception of Cedar.

(3) WEIGHTS AND MEASURES.

Weights and Measures in common use and their equivalents in Imperial Weights and Measures.

WEIGHTS AND MEASURES.

Before the introduction of the decimal system of weights and measures by the late German Government the following standard weights and measures were in use among the natives:—

CAPACITY.

1 Kibaba equal to about 1 pint or $1\frac{1}{2}$ lbs.

1 Pishi 4 Kibaba

1 Frasila 6 Pishi

1 Jizla 10 Frasila

WEIGHT.

1 Ratili equal to about 1 lb.

1 Wakia 1 oz.

LINEAR.

1 Shibiri equal to about 9 inches:

roughly based on the span of the thumb and little finger extended
calculated on the length from the tips to the elbow.

1 Mkono 18 inches:

1 Wari 1 yard.

The late German Government, about 1910-11, introduced the litre and metre as a standard measure of capacity and length respectively, about $1\frac{1}{2}$ pints and 1 metre to 3.34 feet.

The natives, however, continued to use the terms "pishi" and "kibaba" to denote the new measures of capacity, although the metric measures were of greater capacity than the actual native measures.

There exists also an unofficial but universally recognised unit of measure known as the "debe," which is applied to the European kerosene tin which, in consequence of its suitability for head portorage, has been adopted by the native as a convenient receptacle for the conveyance of grain to market.

On the introduction of the metric system by the late German Government the official unit of weight became the kilo and both the native measure "ratili" (pound) and the kilo are now in common use in the native markets.

The unit of linear measure became the metre and this measure with its sub-division, the $\frac{1}{2}$ and $\frac{1}{4}$ metre, is now employed.

The question of the abolition of the metric system and the adoption of the Imperial Weights and Measures, with certain modifications suitable to local conditions, is now under consideration.

(d)

General information regarding the industry and possibilities of development.

Lumbering and timber trade in Tanganyika are not yet well developed. The output of all kinds of timber remained much the same as last year with the exception of poles, which has dropped; (*vide* notes on export of timber has slightly increased. Imports have increased very considerably. From these figures it is concluded that consumption of timber in the country is growing fast.

The roughly estimated sustainable annual yield of all forests, if worked to their full capacity is 100 million feet. Of this, at present not more than 3% is consumable locally nor is it likely that during the next year more than 20% will be required for the local market. Accordingly an export timber trade is indicated.

Distinct possibilities of establishing such a trade have become discernable during the year, namely from the large timber concessions over Kilimanjaro and Tschomme forest reserves. (*vide* para. c, Mr. P. Blunt).

Although fellings in the Shume-Magamba concession have been held up for various reasons until this year production of high grade sawn goods and logs from this concession in 1925 should be on a scale to glut the local market and for export overseas. Local timbers are suitable for all local purposes and a marked decrease in timber imports is anticipated for next year.

A beginning has been made with the export of wood for pencil manufactory while a marked expansion of the tanning bark market seems to have taken place and to have been reflected in the production of bark which the output has risen from 7½ tons in 1923 to 247 tons.

7. SUMMARY OF INDUSTRIAL DEVELOPMENT.

A summarised statement of any developments in the agricultural, forestal, fishing, mining, and other industries of the Colony during the year under review, with a statement as to progress up to date. A special account should be given of Government grants or other action for the development of the natural resources and industries of the Colony.

Agriculture. The year has been marked by large increases in production of the principal export products, viz:—Sisal, cotton, groundnuts, coffee and copra. The following export figures for the pre-war year 1913 and 1923-24 will best indicate the progress made:—

	1913		1923		1924	
	Quantity Cwts.	Value £	Quantity Cwts.	Value £	Quantity Cwts.	Value £
Sisal	416,680	535,580	256,900	367,228	368,560	644,835
Cotton	43,840	120,753	29,529	177,710	50,828	373,710
Groundnuts	179,220	95,932	330,160	264,129	373,680	359,918
Coffee	21,180	46,563	80,937	204,987	105,222	352,529
Copra	109,540	117,401	133,380	131,536	162,500	178,194

Sisal is the only remaining product of importance in which recovery of pre-war production has not been made. The increase over output in 1923, however, indicates chiefly the further rehabilitation of the old plantations that has taken place.

2. The percentage of increase in quantity of exports of the above agricultural products as compared with shipment in 1923, is as follows:—

	Increase.
Sisal	43
Cotton	72
Groundnuts	13
Coffee	30
Copra	22

3. Of the lesser export products (chiefly sesame, rice, millet and beeswax,) there were increases in all except sesame (simsim) which showed a decrease of twelve per cent., due chiefly to replacement by cotton, a product worth seven times as much for export.

4. Two further ploughing schools were opened during the year. Ploughing is now established in the Shinyanga sub-district and has been introduced into the Mwanza district.

Forestry. See 2 (d) of this Section.

Veterinary and Animal Husbandry. The staff of the Department of Veterinary Science and Animal Husbandry as at present constituted, consists of 16 qualified Veterinary Officers, 22 European lay members, Stock Inspectors, Laboratory Assistants, etc., 4 Asiatic Clerks and 100 Native Veterinary Guards.

The Department is essentially organised with a view to the control or elimination of animal diseases throughout the Territory, and to the fostering and improvement of all matters pertaining to the livestock interests and industries of the country.

The Department is administered as a separate unit, under the direction of the Chief Veterinary Officer, but works in the closest collaboration with the Native Affairs Administration, Medical, Agricultural and Game Preservation Departments.

Field operations are carried out under a system of district units working up from Native Veterinary Guards who patrol their respective areas inspecting the cattle periodically and reporting through the European Stock Inspectors to the Veterinary Officer in charge.

In this way it is possible to keep in close touch with the native owners and to develop a reasonably efficient system of disease intelligence.

Revenue production is a minor consideration to the Department which is essentially a spending one, the circumstances, however, which combine to place the Veterinary Department and its elder sister of human medicine in this category as distinguished from the revenue collecting ones, in no wise tends to lessen the value of their services to the Territory.

To altogether assess the value of any form of wealth or produce by the export figures connected therewith is obviously erroneous and were the Veterinary Department to be judged by such a standard, its expenditure of nearly £40,000 could not for a moment be justified.

When, however, it is realised that four-fifths or more of the wealth of the native in the Territory is invested in his herds and flocks and that without the milk and meat which they supply he could not exist, far less prosper, then the true significance of livestock becomes apparent.

To the average native of the Territory, wives and children come first and his livestock next; other matters are of relative importance only in his eyes. The export of camels from Arabia is negligible and yet the "ship of the desert" is the breath of life to its owner.

The most noteworthy feature of the year has been the large measure of success which has attended our campaign against Rinderpest and has resulted in its elimination from 11 additional Administrative Districts. This in itself has more than justified the liberal attitude of the Administration towards livestock welfare in the Territory.

That the Government help in this direction is fully appreciated by the natives themselves was most clearly indicated by the manner in which the native councils and sultans in various areas visited by the East African Commission invariably asked in most insistent terms for more Veterinary Officers, Stock Inspectors and native Veterinary Guards; truly a contrast to the way in which disease used to be concealed when first the Veterinary Department essayed to help the native a few years ago.

As formerly Trypanosomiasis, Rinderpest, Pleuro-pneumonia and East Coast Fever are the major disease problems of the Territory and towards their elucidation the energies of the Department are directed.

The teaching and development of the African Section of the Departmental Staff, which now numbers over 100, proceeds uninterrupted, and many lads are showing great promise. A new innovation during the year has been the employment of Apprentices—youths from 16 years old and upwards who are literate to a greater or lesser degree.

The Veterinary Laboratory, Mpwapwa, has continued to function efficiently, the output of sera, etc., sufficing to meet all requirements of the Territory; furthermore as a training depot for the Staff, European and African, the facilities which it has afforded have been invaluable.

87,000 doses of Immune and Hyper-Immune Anti-Rinderpest Serum were issued for use in the field during the year.

The closer supervision of disease and stock movement, which was possible during the period under review, has resulted in a diminution of disease outbreaks in the Territory.

Propaganda directed towards improvement in the native methods of Hide and Skin preparation has enhanced the price realised for these articles with the result that the export value figure nearly doubled itself during the year.

Similarly educational work in connection with the manufacture of Ghee or clarified butter is now bearing fruit. Considerable improvement is noticeable in the quality of the butter marketed, and the scheme for the improvement of this industry has already been applied to several additional cattle districts. Stress of work in other more important directions prevented the compilation of a new Cattle Census, but in districts where the livestock were counted a satisfactory increase was recorded.

LAND AND MINES.

The Land Ordinance was enacted and came into force from 26th January, 1923, and provides for the granting of rights of occupancy for any period up to 99 years.

The area granted during the year was 17,740 acres, the greater part of which was for cotton growing near the Central Railway.

A new area is being opened up and laid out in 100-acre plots for cotton growing in the Moshi District.

A large number of grants have been made during the year for plots in townships and particularly in the new trading centres on the Central Railway.

There has been a demand for land in the Rungwe District, particularly for coffee growing, and an area of 1,431 acres was granted during the year.

Rights of Occupancy have been granted over public land on 5-acre plots for the erection of ginneries, numbering seven, for the year. In addition, ginneries have been erected on private estates.

Mining. Coal. Only work just sufficient to hold the claims has been done in the Ufipa District. A further lot of claims have been pegged double-banking those held formerly by the Deutsche Ost-Afrika Gesellschaft.

Mica. Mica mining has made considerable progress during the year, work being carried on in three Districts. The number of tons exported was 55 value £27,639, as against 32 in 1923 value £19,172. The bulk of the mica—40½ tons was produced in the Morogoro District. Ufipa District produced 11½ tons and Usambara District 3 tons.

Gold Reef. A large amount of prospecting and opening up of reefs in the Mwanza District has been carried out and a number of new claims have been pegged. The production of gold from this area has been disappointing, owing chiefly to the scarcity of labour. The output from this area was only 241 ozs. as compared with 3151 ozs. for 1923.

The Sekenke Gold Mine has again become a producer and started work on a small scale in June. By the end of the year 743 ozs were produced, valued at £2,972. It is hoped that this mine will now be a regular producer.

Gold Alluvial. The Lupa River Gold Fields of the Rungwe District have proved to be rich in gold, and work has extended to neighbouring rivers, the area now being very considerable. The number of prospectors has increased from 25 in 1923 to 52 in 1924. The number of claims pegged during the year was 128 and the amount of gold produced was 6,811 ozs, valued at £27,244, shewing a very big advance over 1923, in which year 1,508 ozs. were produced, valued at £6,783

Salt. There has been a considerable increase in the production of salt, the principal sources being—

(a) Gottorp, Kigoma District, under the management of the Railway Department, valued at £16,336.

(b) Dar es Salaam. 927½ tons, valued at £4,070.

(c) Rukwa in the Rungwe District has now closed down.

Red Ochre. A small amount of 7½ tons, valued at £26 was extracted at Mondul, Arusha District.

Tin. Cassiterite (the principal mineral of tin) has been found in the Bukoba District. This is now being prospected by the discoverer, who has a sole prospecting licence. No doubt a very rich tin stone has been found in a ravine. The mineral has also been found on the slopes of the

General. The above are the only minerals so far worked in this Territory. It is estimated that there has been a big increase over the results of 1924.

During the year 393 claims have been registered and 191 abandoned or cancelled. The following are the results as follows:—

Mica	...	147	Salt
Gold Alluvial	...	128	Precious Stones
Gold Reef	...	89	Coal

*By "Penal Imprisonment" is meant imprisonment inflicted as a substantive punishment in pursuance of a sentence of a Court of Justice, as distinguished from imprisonment for safe custody, etc.

Questions.

I. If the prison is on a separate system, is the separation complete? And, if not what is the separation enforced by day and night respectively?

II. If not on the separate system, what provision is there for the supervision of the prisoners while in association?

III. How many cells are there; and how many associated wards?

Answers, which apply unless otherwise stated to all prisons in the Territory.

- (a) No.
 (b) By day in gangs; 1 Warder to 6 Convicts.
 (c) By night in associated Wards and Cells, lighted from outside with secured doors and a sentry on guard.

A sentry patrols regularly; all female prisoners are segregated from males.
